Identify the animals by the name that you use. Try to select a code that best describes the event. Use two separate codes only if absolutely necessary. If you can not find a suitable code, use the appropriate group code (100,200,300-900) or 820 "Other inspection". The codes can be edited later. Write any other information you may want to include in the "Description" field. Date DDMMYYYY. Write the initials or some other ID of the person providing each procedure. Check the last colum when the data is moved to the program
